

Customer Profile Texas A&M University

TEXAS A&M
UNIVERSITY.

Located in College Station, Texas A&M University serves over 70,000 students across its 5,200-acre campus.

When Eduardo Mendez joined Texas A&M's Environmental Management (EM) Team in January 2022, he saw an opportunity for process improvement. "Inspections for above-ground storage tanks, cooking oil containers, generators and transformers used to be completed on a clipboard after which, everything was entered into a spreadsheet. Overall, it was very time-consuming and inefficient. We also needed an easier way to locate all of the assets across campus that required inspections" states Eduardo.

The EM team selected CampusOptics in mid-September of 2022, and within a few weeks, the team was conducting inspections on the

mobile app. "Once the inspections were set up, we could geolocate assets on our mobile device, scan a barcode to complete the inspection and even log and assign issues for remediation with the convenience of voice-to-text and in-app photo/video capabilities." Eduardo continued.

“

Once the inspections were set up, we could geolocate assets using maps on our mobile device, scan a barcode to complete the inspection, and even log issues for remediation.

Eduardo Mendez
EH&S Specialist

Word about the CampusOptics platform spread quickly. "Another member of my team responsible for inspecting our stormwater outfalls and construction projects also struggled with manual inspections.

”

Soon he will be using CampusOptics to complete stormwater outfall inspections at nearly 100 different locations across campus, as well as conducting inspections of our construction projects, which are plentiful with all the work that is being done on campus" concludes Eduardo.
