

Nova Southeastern University's IAQ & Ergonomic Assessments, Playground and Pool Inspections, Dental Checklists, Clinical Inspections, and Food Sanitation Audits.

We are excited to announce that a number of new assessment, audit, and inspection forms from Nova Southeastern University are now available in Form Exchange. Learn how NSU is leveraging CampusOptics for a variety of different programs!

Forms Available in CampusOptics

- Indoor Air Quality Assessment
- Ergonomic Assessment
- Pool Health and Safety Checklists
- Food Services Sanitation Audit
- Dental Checklists
- Clinical Safety Inspection
- Risk Management Clinic Walkthrough
- Playground Inspection

Indoor Air Quality & Ergonomic Assessments

The Nova Southeastern University EHS team leverages CampusOptics to streamline indoor air quality (IAQ) and ergonomic assessment requests through a system-generated URL embedded in their email signatures and on their website. When a request is received, technicians use the CampusOptics mobile app to conduct field inspections; efficiently logging investigative details, photos, and root causes. Corrective actions are then automatically routed to responsible parties and tracked to completion. Furthermore, by designating Housing and HVAC personnel as "followers" of IAQ assessments, CampusOptics automatically notifies these teams, eliminating the EHS office as a bottleneck for routine concerns and improving response times through more efficient collaboration.

Playground and Pool Health and Safety Checklists

The EHS team manages campus recreational safety through structured inspection programs. Technicians conduct monthly safety inspections across all campus playgrounds, including those at the Family Center and the K-12 school. Additionally, to ensure continuous oversight of university pools, EHS designed weekly inspection protocols and quarterly health and safety checklists. These streamlined workflows enable student workers, such as lifeguards, to actively participate in monitoring, maintaining high safety standards across all aquatic facilities with the bonus of pool staff being able to track water test results remotely from any computer.

Food Services Sanitation Audit

The EHS team conducts triannual food service sanitation audits to closely monitor health and safety conditions across all third-party kitchens and cafeterias. These proactive evaluations are designed to identify and remediate compliance issues well before official Department of Health inspections, ensuring continuous regulatory alignment and a safer campus dining experience.

Dental Checklists & Clinical Safety Inspections

Unique to the College of Dental Medicine, the Dental Observation and Policies & Procedures Checklists strictly follow CDC infection prevention guidelines. To optimize efficiency, policy reviews were decoupled from direct clinical observations after the combined process proved too time-consuming. On a broader scale, quarterly Clinical Safety Inspections are conducted across all health clinics, providing a reliable framework to track and enforce university safety standards. Consistent with other inspection forms, identified issues are assigned to the appropriate responsible parties, allowing the EHS team to easily monitor progress and verify completion.
